

Risk Factors for Cognitive Decline: Alaska

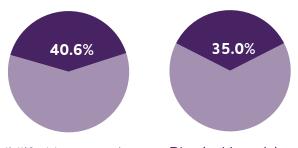

Based on population-level evidence, the six health conditions and behaviors included here increase risk for cognitive decline — and may also increase risk of dementia.

Data are from the Behavioral Risk Factor Surveillance System (BRFSS).

Percent With at Least One of Five Risk Factors (excluding sleep)

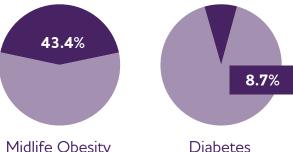

Prevalence of Six Risk Factors

Midlife Hypertension (age 45-64)

Physical Inactivity

Midlife Obesity (age 45-64)

15.8%

Smoking (age 45 and older)

Poor Sleep (<6 hours/night)

Percent With Any of Five Risk Factors (excluding sleep)

None 31.3% One 34.1% Two or more 34.6%

The Public Health Center of Excellence on Dementia Risk Reduction is made possible by the Centers for Disease Control and Prevention (CDC) of the U.S. Department of Health and Human Services (HHS) as part of a financial assistance award totaling \$3,707,435. The contents of this fact sheet are those of the Alzheimer's Association and do not necessarily represent the official views of, nor an endorsement by, CDC, HHS, or the U.S. government.
