## Alzheimer's Caregivers in Connecticut

**In Connecticut, 175,000 family and friends provide unpaid care to individuals living with Alzheimer's and other dementias. Of those receiving care:**

- 64.7 percent are women.
- The average age is 84.4 years old, compared with an average age of nearly 67 for care recipients without Alzheimer's disease and other dementias.
- 56 percent are aged 85 or older.
- 72 percent are a parent or parent-in-law of the caregiver.

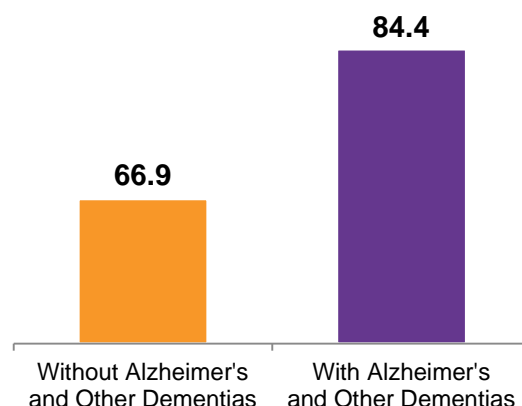

**Alzheimer's and dementia caregivers provide 200 million hours of unpaid care annually.**

- On average, Alzheimer's and dementia caregivers spend 27.6 hours per week providing care, compared with 18 hours for other caregivers.
- 31.7 percent of caregivers provide 20 or more hours of care per week.
- 52.5 percent have been providing care for more than two years compared with 32.5 percent for other caregivers.

**Total Value of Unpaid Care**

**\$2.5 Billion**

**Average Age of Those Receiving Care**

**Alzheimer's and dementia caregiving takes a physical and emotional toll on caregivers.**

- Nearly one in four (24 percent) Alzheimer's caregivers say they only sometimes, rarely or never receive the emotional support they need.
- As a result of the physical and emotional toll of caregiving, Alzheimer's and dementia caregivers had \$132 million in higher health care costs of their own in 2012.

Data come from 2013 *Alzheimer's Disease Facts and Figures* and the Behavioral Risk Factor Surveillance System (BRFSS) Caregiver Module administered in Connecticut in 2010. The BRFSS is a public health survey conducted each year by all states, in coordination with the Centers for Disease Control and Prevention (CDC). The Caregiver Module is an optional set of 10 questions available for use in all states.
