**HEALTHY PEOPLE 2020 DEMENTIA OBJECTIVE DIA-2**

Reduce the proportion of preventable hospitalizations in persons with diagnosed Alzheimer’s disease and other dementias

In 2006-2008, among adults aged 65 and older with diagnosed Alzheimer’s and other dementias, 25.3 percent of hospitalizations were preventable.

*Healthy People 2020 has set a goal of reducing this percentage by 10 percent to 22.8 percent.*

Hispanics with Alzheimer’s and other dementias are nearly one and half times more likely to have a preventable hospitalization than Whites.

Those at lower income levels are significantly more likely to have a preventable hospitalization.
